

## Workshop on eTaal held in West Bengal

Ministry of Electronics and Information Technology (MeitY) along with National Informatics Centre (NIC), the nodal information technology arm of Government of India, have developed Electronic Transaction Aggregation & Analysis Layer (eTaal) portal(URL: <http://etaal.gov.in>). It provides an aggregated view of eTransactions performed through e-Governance applications implemented including, but not limited to, the national-level mission mode projects (MMPs) under the National e-Governance Plan (NeGP). eTaal automatically pulls the e-transaction count, but not the personal details, from the applications using web service technology. The dashboard also facilitates quick analysis of data of various applications in tabular as well as graphical form enabling users to drill down to the lowest level of detail without compromising security and integrity of the servers from where data has been captured.

eTaal portal covers e-Services delivered to the citizens across the country. e-Transaction count for services has been increasing on yearly basis and approx. **3173 e-Services** from 21 Central Ministries and all 36 States/UTs and 21 Mission Mode Projects (MMPs) have been registered with eTaal categorized into 30 standard services. This reflects the government-wide acceptability of eTaal. **Around 2432 crore transactions** have been recorded so far since the inception of the project in 2013.
